

Elevate Florida Program Snapshot

Reporting Period: June 2026

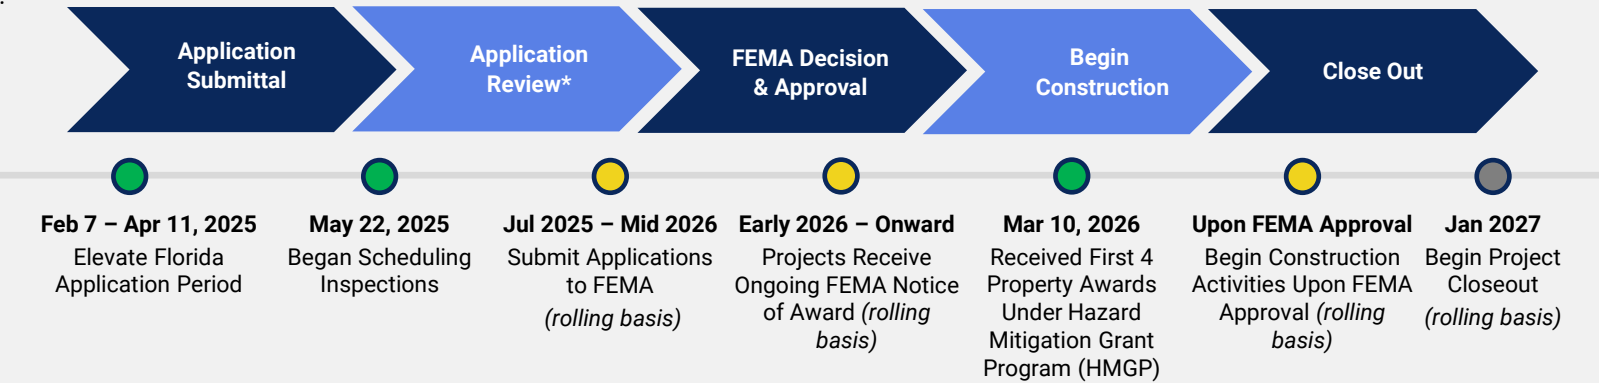

Elevate Florida is an innovative statewide initiative designed to improve the resilience of approximately 2,000* homes through nearly \$400 million in federal funding.

**This is subject to change based on project complexity, available funding, and program requirements.*

Elevate Florida Status

Key: ● Completed ● In-Progress ● Not Started

As of June 29, Elevate Florida has received 37 additional property awards from FEMA, increasing the total number of awarded properties to 53. Not all awarded properties ultimately move forward if Property Owners withdraw or are not responsive.

** Applicants in review may be alternates and move forward if an awarded applicant withdraws*

Mythbusters

The Elevate Florida program is clearing up misconceptions by sharing timely, accurate information.

Myth: “At any point in the program, Property Owners can receive temporary relocation assistance, regardless of their designated project type.”

Fact: Temporary relocation services are only eligible for Structure Elevation, Elevation Plus, Structure Elevation + Wind Mitigation, and Mitigation Reconstruction projects. Property Owners with eligible project types are asked to complete the Temporary Relocation Form and indicate whether they would like to participate in the program’s temporary relocation services. Requests for temporary relocation assistance must be completed before signing the Homeowner Grant Agreement. The Elevate Florida program can then factor the associated temporary relocation costs into the estimated total project costs and Property Owner’s cost-share. These costs will be outlined in the Financial Packet and Homeowner Grant Agreement. Additional information on the temporary relocation process and the expectations can be found in the [TRAS Property Owner Guide](#).

Program Highlight: Mitigation Reconstruction and Design Guidelines

Mitigation Reconstruction projects must follow the following approved project’s specific design and programmatic guidelines:

Code-Compliant Structures

The floor plan and finish options will match what was selected by the Property Owner during the design meeting. All work completed, including mechanical systems and utilities, will meet standards for a code compliant structure.

Standard Finishes Only

The final design and reconstructed house will only have the option for standard finishes. Property Owners will select between builder grade finishes and will not have the option to upgrade any hardware, or fixture finishes during program construction.

110% Square Footage Cap

The reconstructed structure’s footprint cannot exceed 110% of the original square footage of the structure. The additional 10% is factored into any new stairs or landings necessary for the new structure; not additional livable square footage.
